

## **MBA Design and Display Products** **mila-wall® Features and Benefits**

MBA Design and Display Products was established in 1975 and incorporated in the U.S. in 1987. As a result of providing quality driven products and dedicated service for many years to the museum and art gallery communities, as well as to art fair organizers, MBA has become a trusted and valued partner to our customers who are seeking solutions for creating demountable, site assembled, temporary partition wall panels.

Our mila-wall® modular wall panels offer design flexibility and quality standards that are unsurpassed in our industry and are truly known and referenced as the standard solution and top choice of the museum community, as referenced by over 1200 - mila-wall® installations worldwide (over 400 - of these institutions located in the U.S. including The Smithsonian and The Metropolitan Museum of Art in New York). With no exposed hardware, options to incorporate electrical wire management into wall panels, availability of lighting sources, leveling feet, and a wide range of diversified hardware that is compatible with all past, present, and for future product offerings, mila-wall® offers a great amount of functional features and benefits.

In addition to the elegant appearance, high quality standards, and technical benefits, the following are just a few of the cost saving and long-term benefits that will be realized by purchasing mila-wall®.

- #1. Installation & Dismantling Efficiencies:  
mila-wall® only requires two (2) people to install. mila-wall® assembles and dismantles quickly which reduces the amount of “dark time” in gallery or changing exhibition spaces.
- #2. User-Friendly Wall Technology:  
You do not need experienced laborers/carpenters to install a mila-wall® exhibition. mila-wall® will reduce labor costs and eliminate the need for outside contractors. mila-wall® is TUV certified for exceptional Safety, Stability, and Security.
- #3. Storage Efficiencies:  
Since mila-wall® is only 40mm (1.57”) thick and breaks down into smaller manageable panel sections, it can be stored in small, compact spaces. Even monolithic mila-wall® structures (made up of spaced apart, double wall sections with end cap panels creating a larger, architectural foot prints) dismantle easily and can be stored easily. Rolling storage carts are available and assist in handling as well as contributing to storage efficiencies.
- #4. Paintable and Removable Panel Finishes:  
The panels can be painted over and over using a standard acrylic latex paint. After several years of painting the walls, MBA vinyl surface coverings can be removed and replaced easily to establish a new clean surface which can then be repainted or used as is in 150 – available colors.
- #5. Nailable Interiors / Double Honeycomb Interior / Adjustable Leveling Feet:  
The inner core supports 44 pounds per nail or screw. The dense honeycomb makes the wall modules lightweight. Adjustable leveling feet on each module allow the structures to adapt to uneven floor conditions and make the structures extremely stable. Holes are easily repaired using standard wood fillers.
